

_PAsup_reportingGroups_Introduction

A reporting group consists of student registrations or student tests that are selected and assigned to that group.

- A reporting group of registrations contains all student tests assigned to a student for an administration.
- A reporting group of student tests can contain single or multiple subject tests.

After you create a reporting group, you can assign a user to it. The user can see reports for the student registrations or student tests in that group. You can assign students to a reporting group and view reporting groups by student registrations or student tests, as determined by the program. A student's test and registration can be tied to more than one reporting group within an organization.
