

# \_TN\_ChecklistInstall

To set up installable TestNav, complete the following:

## Checklist

*This checklist provides ordered steps that correspond to sections in this page. You can click checklist links to go directly to the corresponding page/section.*

1. [Download the app](#) from the applicable store, and [install TestNav](#) using the instructions below.
2. Review launch instructions to prepare for your testing session.
3. [Run SystemCheck](#) on each device.
4. Review the [Find Response File Backups](#) section below for each type of device in your testing environment. You should understand how to find saved response files (SRF) and log files before the testing session.  
*On Android devices, Chromebooks, and iPads, the SRF default primary save location varies by operating system and is NOT customizable.*
5. Communicate SRF and log file locations and download information to test proctors.
6. If you are using ProctorCache, [download it](#) and install it on your designated proctor caching computer(s).
7. Run an infrastructure trial using a practice test.  
*Pearson strongly recommends running an infrastructure trial BEFORE the actual test day to verify the technology setup is complete and to familiarize teachers and students with the test.*
