_TN_Java_SetUp

Set Up Java and Enable Pop-Ups for TestNav

Configure Java and enable pop-ups for TestNav using the following instructions.

Install and Enable Java

You must install and configure Java on each testing computer. Download the latest supported version of Java, and follow the installation instructions.

Allow TestNav Java Applet to Run

The first time you start TestNav and App Check, you must allow the TestNav Java applet to run.

> ⊕ If you do not accept the security certificates, you see an error message. You must close the browser and complete the update before you can use TestNav and App Check.
