Transcend Assessments

Transcend assessments are adaptive tests used for district-interim assessments. All Transcend items are part of a secure item pool within Transcend that are pulled into assessment management systems for assignment and **TestNav**, Pearson's online testing platform, for delivery.

As a result, items are not available to preview before or after a Transcend test.

Authorized users can create and view district test blueprints that are aligned to their district's scope and sequence. After an authorized user selects standards for each instructional unit, you can schedule assessments within your assessment management system for students to take using TestNav.
